2003-2011
U.S. Marine Corps
Intelligence Specialist

Education

M.ED in Science Curriculum
and Teaching
Fitchburg State University

B.A. in Sustainable
Development & Experiential
Education

Seth has been focused on addressing the need for sustainable infrastructure for much of his career. His early work focused on construction work and transitioned into business development in 2012, focusing on project origination through direct and channel partner methods.

Before joining RER, Seth carried out business development within the commercial, industrial, nonprofit, and small-scale utility solar segments spanning eleven U.S. states. Seth has combined his national security focus from serving in the Marines, along with his education background to bring a unique approach to renewable energy business development at RER.

Seth brings a passion for sustainability, and a deep background in project acquisition, risk management, and structured finance to identify projects at RER. In addition to his work in renewable energy, he also gives his time as a volunteer with the Solar Ready Vets Network, the American Legion and the Marine Corps Association.

Seth obtained his Master of Education degree from Fitchburg State University, with a B.A. in Sustainable Development and Experiential Education from the University of Massachusetts Amherst.
